

SELDÉN

J24

Seldén is the world's largest builder of One Design and Cruising Masts.

Mast

The same trusted and speedy mast, with new halyard exit positions and a new spreader bracket! The new spreader bracket is "thru-bar" style and uses Aluminum. This provides weight savings while avoiding corrosive contact between dissimilar metals. Masthead tapers are machine cut & welded for a perfectly consistent result every time!

Spinnaker Pole

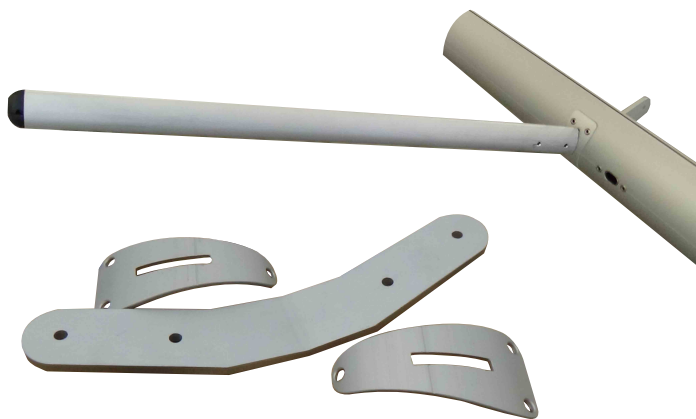

Our 59mm carbon poles weigh in at 1.86kg/4.1lb. Paired with our ever popular end fittings, it's a sure winner for your bow team.

Boom

The new J24 Boom is approved Class Legal and measures at minimum tip weight. The boom was actually TOO LIGHT! so we add an internal 1lb corrector weight which is easily removed should the rule ever change. There are no external protrusions which makes it friendly to sail cloth. The included gooseneck toggle fits existing J24 masts so it pins right in. The outhaul takes advantage of the inboard boom end sheaves to minimize potential for twisting and binding of the outhaul system.

Features & Fittings

New spreader bracket is "thru bar" style, light-weight at .4lb and the same alloy as the Mast.

Halyard Exits moved to preferred USA positions.
Starboard- Spin, Jib
Port- Main, T'lift

Boom "tip weight" is just above class minimum

All hardware is track mounted, eliminating any external protrusions which could snag people & sails. Comes with outhaul setup.

The new boom pins right in to J24 masts. The inboard end helps keep the outhaul system tangle free.
